Virginia Uranium Inc. is pleased to announce that an updated scoping study on the Coles Hill uranium project is now underway. The outside engineering firms selected to lead this phase of the project are Lyntek Inc. and BRS Inc. Their work will provide a current analysis of the fundamental project economics. The results are anticipated within the first half of 2010.

Lyntek, Inc. is an internationally renowned mineral processing company with extensive experience in conventional and in-situ uranium mining projects. Lyntek's past uranium development experience includes work on international and U.S. sites. They have selected BRS, Inc., one of the few mining engineering companies in the U.S., to analyze the mining concepts of the project. BRS, Inc. is a mining engineering company that has extensive experience dating back decades with the conventional uranium mining business and the related state and federal government regulations.

The combined expertise of Lyntek and BRS provides a wealth of experience and knowledge that will be invaluable for the advancement of the Coles Hill project in a manner that will use the best practices in the industry, and set the bar for environmental stewardship.

The purpose of a scoping study is to provide the foundation for economic and technical information that will be translated into more detailed information as the project advances. The scoping study will provide an overview for estimated production costs and an analysis on the number and types of jobs that would be created, in addition to other critical technical information.

"The scoping study will give us a better understanding of the up-front capital investment into the local community, as well as the skills required and number of employees that we would hire," said Walter Coles, Sr., Chairman and CEO of Virginia Uranium Inc. Coles added, "This is an exciting and important step to quantify the benefits of developing the Coles Hill uranium project for our nation's energy independence and for the economic prosperity of Southside Virginia."

"After completing our resource confirmation with the NI-43-101 last spring, the next logical step is to perform a scoping study. Scoping and feasibility studies were performed on this project by Marline and Union Carbide over 20 years ago, and the time has come to update that information based on today's mining and milling technologies and economics," said Patrick Wales, Project Manager for Virginia Uranium Inc.

About Virginia Uranium Inc.: Virginia Uranium Inc. is a Virginia corporation established in 2007 by the Coles and Bowen families to begin preliminary work on the development of one of the largest undeveloped uranium deposit in the United States, which is located at Coles Hill in Pittsylvania County, Virginia.
